

LogiXML Announces Major New Release of Its Highly Rated Business Intelligence Platform

Logi Info Version 10 Shipping

McLean, VA (May 11, 2010) – [LogiXML](#), the web-based business intelligence (BI) pioneer, announced today a new release of the company's business intelligence platform, Logi-Info Version 10. According to the company, Logi-Info Version 10 includes more than 200 enhancements and features Logi XOLAP, an innovative real-time, multi-dimensional analysis engine.

LogiXML was the first to market with a true web-based business intelligence platform (Logi-Info) that offers the functionality of traditional BI platforms, without the unnecessary complexity and costs and need for special expertise. Logi-Info is competitively priced with commercial open source BI products and has the added advantage of being a complete and integrated platform vs. a collection of disparate components. Logi-Info was highly rated by customers in the recent [Gartner BI Platform User Survey](#).

Logi XOLAP multi-dimensional analysis brings the analytical power of data cubes without the need to go through the traditional, complex, data modeling process, allowing users to more easily analyze large data sets. It is completely integrated into the Logi-Info BI platform and is available at no additional cost.

"Logi XOLAP is unique because of its flexibility and ability to work against any data type and data model, even in real-time," said David Abramson, LogiXML Director of Product Management. "In a matter of minutes it can be configured to deliver highly interactive multi-dimensional data analysis power which allows end users to get insight out of their existing data without forcing them to change their infrastructure or data model."

According to Mitchell Cassells, President of Cassells Management Consultants, "Logi XOLAP was easy to setup and provides valuable in-memory analysis capabilities to our end-users. We were pleased to find out our current infrastructure supported the rollout. Best of all, our customers are thrilled."

LogiXML will be hosting a [webinar](#) on May 25, 2010 at 11:00 am EST, to review Logi-Info and its new capabilities available in Version 10.

About LogiXML, Inc. (www.logixml.com)

LogiXML is the smart choice for Business Intelligence, giving customers more power with less effort and cost. It's simple to start creating web-based dashboards in hours, reports in minutes and analysis on demand, without complex pricing schemes or user fees.
